**Model B3400-0003
Digital Coaster Pager**

Description

The Digital Coaster Pager has three user-programmable alert modes: vibrate only, light and vibrate, light and beep. The coasters are paged by the MultiPage Transmitter that has an excellent 1/4- to 1/2-mile range. Coasters are stacked on top of a charging base until individually removed for use. To resume charging, simply return the coaster to the stack. With normal, daily usage, the coasters' charge will last 8-10 hours or more between charges. User-replaceable rechargeable batteries typically last 3-5 years, depending on use. Ideal for restaurants, medical offices, or truck loading docks.

Features

The Coaster "Out of Range" feature informs customers that they are out of range the moment they step out by continuously playing a melody until the moment they step back in. This feature helps reduce the number of missed pages as well as accidental coaster walk-outs. Coasters are rechargeable and will last approximately 3-5 years before replacement of the battery is necessary.

Operation

The transmitter and charging base simply plug into an outlet using the power adapters supplied. Additional charging bases and coasters may be purchased at any time. To page a guest, simply enter the assigned coaster number into the transmitter.

Model B3400-0003 Digital Coaster Pager Specifications

Operation	MultiPage Transmitter
Frequency	457.575 MHz
Baud Rate	1200
Distance Range	¼ to ½ Mile
